Description:

The Skill Development Cell has organized a One week workshop on “Game Design using Build Box” from 04th July 2022 to 08th July 2022. The course Resource Person is Sri C Sathish Kumar, APSSDC Trainer.

The main objective of this course is to introduce Game Design concepts using Build box. Build box is the world's first software that truly allows anyone to create amazing games regardless of technical skill. Due to its unique user interface, making games becomes a fluid process that doesn't require any scripting, programming or software design experience. There's no coding skills or programming knowledge required.

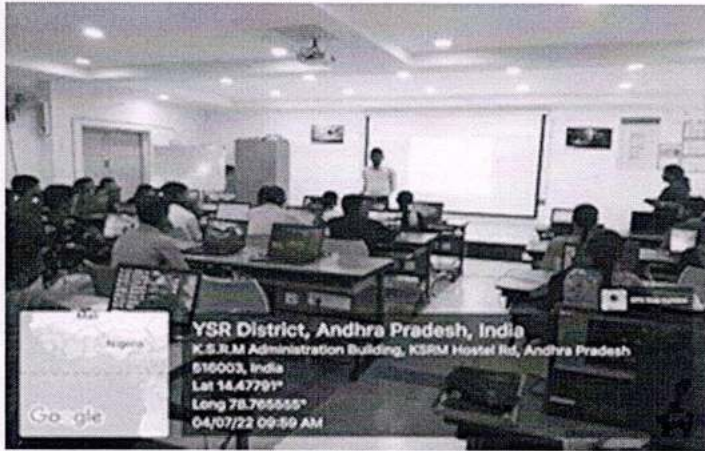

This software was designed to allow anyone with an idea to dive straight in and start creating.

In Build box 2.0 you can create stage clear games that wildly open up gameplay possibilities. The multiple world features allow you to create multiple worlds to mix and match as you see fit. The options are endless. Make a simple casual game or a complex adventure game with text, playable cutscenes, and multiple themed worlds.

Animated menus are another new feature that lets users customize their players' gaming experience. Animate your menus or create your own complete cutscenes with our new keyframe animator. Build box 2.0 is loaded with new tools and editing options to easily add advanced elements into your game with minimal effort.

Plat Form : Off line
Venue : Engineering Graphics and Design Lab
- Description** :

Learning to use a CAD system is similar to learning a new language. It is necessary to begin with the basic alphabet and learn how to use it correctly and effectively through practice. This will require learning some new concepts and skills as well as learning a different vocabulary. Today, the majority of the Mechanical CAD systems are capable of creating three-dimensional solid models. Nonetheless, all CAD systems create designs using basic geometric entities and many of the constructions used in technical designs are based upon two-dimensional planar geometry. The method and number of operations that are required to accomplish the basic planar constructions are different from one system to another. AutoCAD provides many different ways to accomplish the same task. For example, to activate a command, you can select it from a menu or a toolbar, or type the command name at AutoCAD's command prompt. There is no right or wrong way to do something in AutoCAD. You will develop techniques that you find most comfortable for the way you work and the types of drawings you create.

You may want to customize AutoCAD for your particular needs. There are also many common drafting tasks that can be automated by using scripts and macros, or by writing or purchasing add-on applications that run inside AutoCAD, tailoring the program for specific drafting and design disciplines. In this we illustrate AutoCAD objects line, circle, rectangle, arc, ellipse, and polygon, by drawing different shapes and apply the three methods of coordinate system and compare between them: Absolute Coordinate System, Relative Coordinate System and Polar Coordinate System.

Computer-Aided Design is most employed by Engineers to help create, modify and/or analyze graphical representations of product+designs. Its applications stretch across a multitude of industries due to its many popular benefits.

CATIA stands for Computer Aided Three-Dimensional Interactive Application. It's much more than a CAD (Computer Aided Design) software package. It's a full software suite which incorporates CAD, CAE (Computer-Aided Engineering) and CAM (Computer-Aided Manufacture). So, let's take a look at each of these areas and the tools that CATIA offers professionals to enhance innovation in product development.

Description:

The guest lecture on AI applications in signal processing organized by KS.R.M.C.E, ECE department .Dr. G. Hemalatha (HOD, ECE), presided over the inaugural function. The guest delivered the importance of “Artificial Intelligence applications in signal processing” and given suggestions and ideas for doing projects on signal processing.

Artificial intelligence (AI) offers new opportunities to improve signal processing systems for various real-world signals, such as biomedical and audio. You can use MATLAB products to interactively explore, create, and preprocess data, engineer features, build AI models, and deploy AI systems.

Instead of relying on aggregate features defined by the traditional signal processing tools, Reality AI discovers features directly from the raw sensor signal data in all of its inherent noisiness and complexity. This approach allows for consideration of information in both time and frequency domains, and allows for detection of conditions with much more subtle signatures.

Our algorithms are based on patented techniques using mathematics described in the literature as sparse decomposition or sparse coding, as well as a number of other related proprietary techniques. These techniques operate unsupervised or semisupervised to dynamically discover an optimal feature set for describing similarities between signals of the same class and differences between signals of different classes.

Description	<p>One day seminar on “The Power of Body Language” has been organized by the Department of Humanities & Sciences on 31st October, 2019 in Civil Seminar Hall at 3.00 pm. The main aim of the seminar is “to talk about a very important and powerful topic – body language, which plays a key role in the recruitment process of each and every organization out there”. Students actively participated in seminar. The presentation given by the resource person K. Eswara Reddy on introduction of the body language and its types made students to be in seminar with more interest and enthusiasm. Some of the students interacted with the speaker and cleared their doubts. Finally, the program was concluded with the vote of thanks by Mr. N. Raghunatha Reddy, Asst. Professor, Dept. of H&S. Around 63 students actively participated in the program.</p>

Description:

The Guest Sri. S.L. Prathapa Reddy explained the concepts Wireless communication networks. The methodologies and the areas where to use these methodologies. The Present scenario of Wireless communication networks. He explained every concept by taking understandable examples.

The lecture started with the essence of the requirement of modulation. The speaker has stressed upon the requirement of data, signals and which in turn perceived as information are sent from one location to another in fraction of seconds in the current day. This is possible with the rapid development in the field of Electronics and Communication Engineering. Earlier systems use analog modulation that allows the message signal to be propagated over longer distances. But these systems tend to be vulnerable to noise. Hence, with the developments in field of communications the new era of Digital conversion from Analog has evolved. Further, drawback on analog based communication systems are discussed paving way to digital communications. The speaker has stressed upon the usage and need for satellite communications. A communications satellite is an artificial satellite that relays and amplifies radio telecommunication signals via a transponder; it creates a communication channel between a source transmitter and a receiver at different locations on Earth. Communications satellites are used for television, telephone, radio, internet, and military applications. Further, the effect of environment on the satellite communications is discussed. The concepts of Non-LOS(NLOS) and beyond-LOS(BLOS) are the main highlights of the lecture that has motivated the entire stream of audience. These are the two main cases of propagation that are successfully deployed to provide robust and secure link. Further, highlighting on the requirement of wireless communications, the lecture ended with the introduction to the basics of cellular communications and a questionnaire from the students is dealt at the last.

What is meant by IPRs?

Intellectual Property (IP) is any creations of human mind. Like tangible property, their creation has a value and, as with all property, it needs to be protected.

Intellectual Property Rights (IPR) gives them this protection, as well as helping them exploit and control their IP.

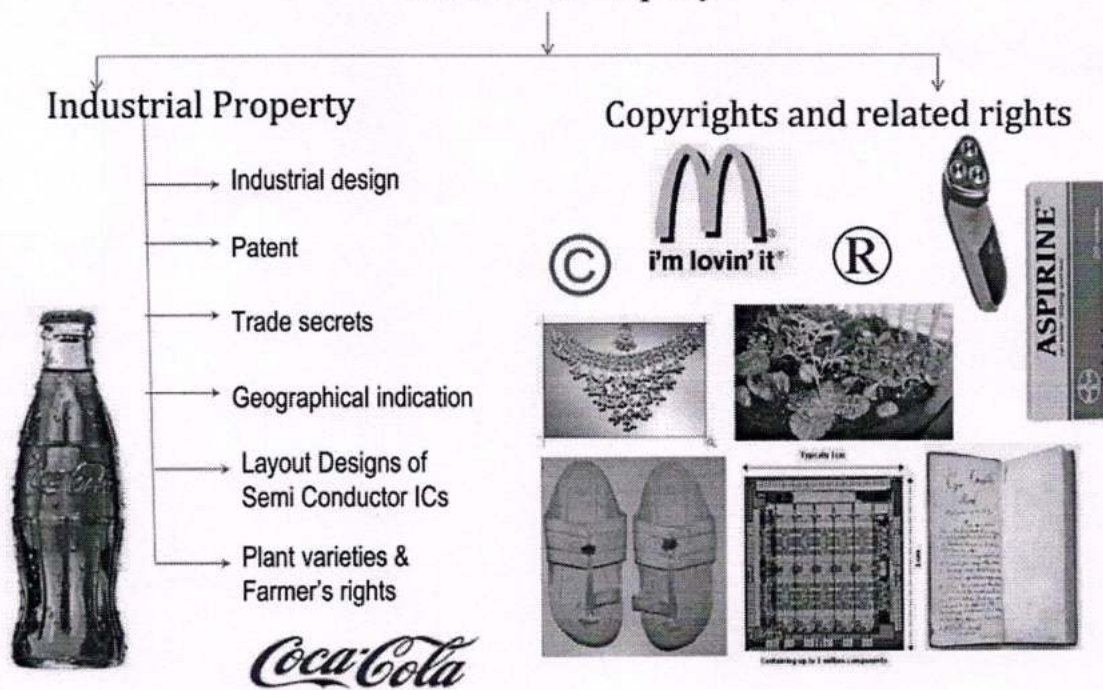

“The exclusive right granted by State, to prevent others from using, manufacturing, distributing - inventions, processes, applications, new and original designs, trademarks, new plant varieties, data bases and artistic and literary works”. Such a person is known as ‘rights owner’ or ‘rights holder’.
